Experience

2021 – 2026

Culture Amp

Lead Product Designer

Joined as a mid-level product designer in 2021, promoted to senior in 2022 and lead in 2024

Work delivered to customers

- Led the design of a two year rebuild of the Engagement reporting experience, moving from a monolith onto new infrastructure. As part of this rebuild we addressed long standing customer feedback tied to multi-million dollars of ARR in feature requests, covering both new functionality and pain points in the previous experience. We provided admin users with greater control over the data that could be shared, which resulted in more employees within an organisation receiving a report.
- Designed AI features for the flagship engagement product, including AI comment summaries (2023) and the Performance Culture Quadrant and Insights agents for Coach.
- Redesigned the survey welcome screen, resulting in a 9% increase in completion rates.
- Led the creation of a roles and permissions framework and strategy for the Engagement module, that expanded to influence the platform wide strategy, in collaboration with various teams and stakeholders across the organisation.

Design leadership, strategy and process improvement

- Co-built and maintained the Design Sandbox with a small team of designers, so anyone could deploy and share AI prototypes from a single slash command. 15 designers and PMs adopted it.
- Prototyped the Performance Culture Quadrant leveraging AI and real survey data in a development environment that I co-built and maintained. The customer and internal testing that followed resulted in the Performance Culture Quadrant being funded by executive stakeholders.

- Designed and maintained the Engage domain design system, which fed back into the central Kaizen design system.
- Created the template for designers to present their work in product reviews, with director, VP and executive stakeholders, after designers raised concerns with the effort and time investment required.
- Provided design leadership across the organisation facilitating cross-domain design critiques, UI/UX working group participation, design system contribution, seconding to teams across the organisation to assist in defining their strategy and vision, and mentoring senior and mid-level designers.

2021

A Cloud Guru / Pluralsight
Product Designer

- Led qualitative and quantitative user research to understand customer pain points and needs in the administration, and reporting, of teams by admins of A Cloud Guru.
- Facilitated ideation workshops with cross-functional teams for rapid solution generation and alignment between the team and stakeholders.
- Worked with senior stakeholders, and multiple teams, to plan and execute the integration of the Linux Academy product into A Cloud Guru. This process involved analysing qualitative and quantitative data, conducting product audits, and working with product managers and engineers to assess integration viability, feasibility, and desirability.

2018 – 2021

Ento
Product Designer

- Designed, implemented and maintained the design system in collaboration with front-end engineers to ensure a consistent design language which brought consistency to the product, as well as the design and engineering workflow.
- Collaboration within a cross functional trio conducting customer research, scoping and ideation, an iterative design process to gather customer feedback, working with engineering partners to understand feasibility and measuring the value delivered to customers via customer feedback and engagement metrics.

Designed homewares, digital marketing assets and client websites between 2015-2018

Education

2012 – 2014

La Trobe University Bendigo
Bachelor of Graphic Design
